

Container Lifting Jacks

- Lightweight
- Durable
- High Lift Capability
- Effortless Operation

Designed for use with standard ISO shipping containers, this portable container handling system is ideal for loading and unloading freight transport vehicles. Its lightweight and durable construction ensures easy transport and a long, trouble-free operation. Efficient hydraulics powered by an electric or petrol motor provide effortless, high-lift capability of up to 32 tonnes.

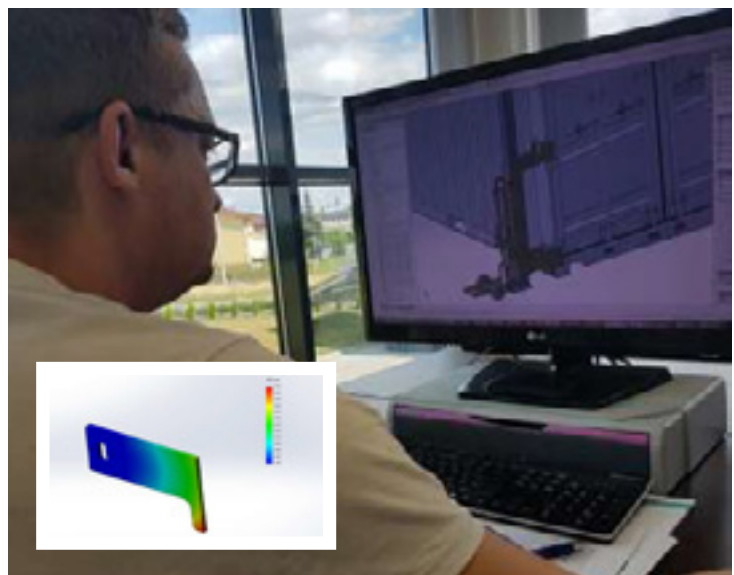

Engineered by Expert Designers

These Container Lifting Jacks are crafted by specialists in advanced mobile solutions and designed and engineered to the highest quality standards. Moreover, we are constantly working to improve the design of the jacks further.

Safety

In the case of heavy equipment, safety is always a crucial factor. We take all the necessary steps to minimise the risk during the operation of our solutions and provide the static calculation for every manufactured unit.

Container Lifting Jack Kit

4 x Lifting legs.

4 x Stabilisation belts.

1 x Hydraulic power unit (230-240V, 50Hz) with oil.

1 x Set of hydraulic hoses and rigging for 20' containers.

Two Year Warranty

A two-year limited warranty covers each set of jacks.

Up To 1,7m Lift

Maximum lifting height is set to allow safe and quick container loading and unloading.

Up To 32T

The jacks are designed to lift a maximum weight of 32000 kg.

Accessories

Petrol Powered Generator

The standard version features an electric motor to run the hydraulics. A petrol-only version is also available to better utilise the jacks in areas with limited access to grid power. Rope engine starter is included in the standard price.

Wireless Controller

The optional remote controller brings a whole new level of mobility. The wireless controller allows you to better control your jacks during operation.

Wooden Pads for lifting legs

Our Container lifting jacks are designed to operate on multiple types of ground. These optional pads make them suitable for use on gravel or any kind of less stable surface.

Stand for Hoses

This additional stand allows you keep your hoses in order and able to operate faster. It also makes transporting the hoses as easy and convenient as possible.

Hoses for 40', 45' Container

The jacks are supplied with standard hoses suitable for the 20' containers. In the case of longer containers, additional hoses are available.

Certification

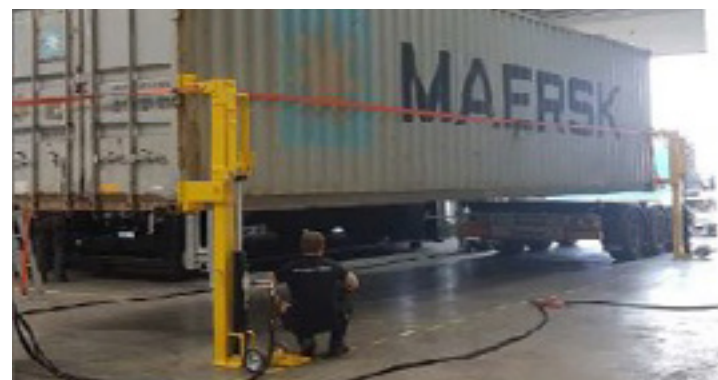

The Jacks are designed and engineered to meet the international standards harmonised within the 2006/42/EC Directive. Each jack set is supplied with CE Certification.

Two Year Limited Warranty

Our equipment is designed for trouble-free operation for prolonged periods. Every set of jacks comes with a 2-year limited warranty. Structural alterations of the product without the manufacturer's written consent will result in warranty loss. All warranty conditions are specified in the user manual provided with the product.

Usage and Transport

Before any operations, the user should always familiarise himself with the supplied user manual. These Container lifting jacks are designed to be operated by at least two people. The entire lifting system must always be placed on ground that can support the cargo's weight. Thanks to the convenient handles and wheels, the lifting jacks are very easily moved around by just two operators.

GET YOUR CONTAINERS MOVING

REDUCE YOUR RELIANCE ON EXPENSIVE AND UNWIELDY CONTAINER MANAGEMENT SYSTEMS.

The Coldene shipping container handling system provides a quick and easy way of moving loaded and unloaded ISO freight containers for safe ground level cargo processing or for container storage, maintenance, refitting and repurposing
